About the Exhibition - Keep Flying: AI Art and Arabic Heritage

Falconry is a living heritage in Qatar and the Gulf which connects the region culturally and historically, symbolizing vision, speed, and endurance. The presented collection of human and machine co-generated falconry paintings is produced using the Artificial Intelligence (AI) technology *Style Transfer*. It aims to show the distinguishable features of falcons and falconers in a new way, while preserving their original aesthetics and sentimental values. The exhibition exemplifies how emerging AI technologies can empower a computing machine to learn about important subjects and artistic styles, and then perform with the creative decisiveness of a human artist.

The happening of this exhibition has been greatly supported by the College of Science and Engineering, Hamad Bin Khalifa University, Qatar and Katara Cultural Village.

About the Artist

Dr. James She is a university professor and media artist. He is currently an Associate Professor in the College of Science and Engineering at Hamad Bin Khalifa University, Qatar. His research interests are focusing on the uses of Artificial Intelligence and multimedia for art, media, culture and human creativity. He was also a visiting artist at Fire Station Museum, Qatar Museums in 2020. His artworks were previously exhibited in Qatar, Australia, Thailand, China and various other countries.
